DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-18, drawn to method of assaying TOSO receptor protein binding, classified in class 435, subclass 7.1.
 - II. Claims 19-22, drawn to a method of genotyping, classified in class 435, subclass 6.
 - III. Claims 23-25, drawn to method of diagnosing apoptosis effect, classified in class 435, subclass 7.1.

The inventions are distinct, each from the other because of the following reasons:

Group I & II are independent from Group III because is drawn to nucleic acid and to polypeptides. Polypeptides and nucleic acids have distinct chemical structures and physical properties, the former composed of amino acids and the latter composed of nucleotides. Further, they have distinct utilities, such as use of nucleic acids in hybridization and use of proteins for enzymatic function. Therefore, the above inventions are novel and unobvious over each other.

Group I and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different

Art Unit: 1656

inventions Group I involves the in vitro binding detection of compounds while Group III is drawn to the diagnosis in vivo of TOSO effect on apoptosis which may involve a plurality of system variables including the number of TOSO receptors and/or immunological effects.

Because these inventions are distinct for the reasons given above and the search required for each Group is not required for other Groups restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
